Reliable service and knowhow designed for OEM's

When our customers come to Flexible Drive with a problem we use our engineering, concept design and prototyping capability to deliver targeted product solutions.

Flexible Drive understands the challenges our Original Equipment Manufacturers face, and we bring the knowhow and capability to meet those challenges.

The original equipment environment is very different to the replacement parts market. OEM teams need to maintain higher standards in analysis, design, testing, production, quality and productivity across low volumes (by global standards), within strict policy frameworks and tight deadlines. We deliver services to those demanding standards.

Flexible Drive specialises in control systems, and the integration of those systems with OEM platforms. Our work involves the technologies of:

- Situational Awareness,
- Decision Support
- Response Mechanisms

As well as the practical execution of those technologies into highly competitive production parts.

We can interpret your brief, explore abstract concepts, problem-solve and bring a solution back to a reliable production part within your specifications

We have processes in place to give you dependable supply chain management.

We know how important it is in your industry to have a reliable supplier delivering the parts you need, when you need them. We have worked with many and varied OEMs for decades, providing them with engineering support and solutions to keep their product competitive and their production running smoothly. That experience has been earned in a diverse range of industries including but not limited to transportation, automotive, defence, rail, light and heavy vehicles, industrial equipment and marine.

We have continued to invest heavily in supply chain management to facilitate ever improving delivery capabilities. We maintain a Tier 2 ERP system Sage X3 that supports EDI and online integration so that your experience can be as seamless as possible. We stand by our availability and make that commitment to you.

Our prices are competitive so you can be competitive too.

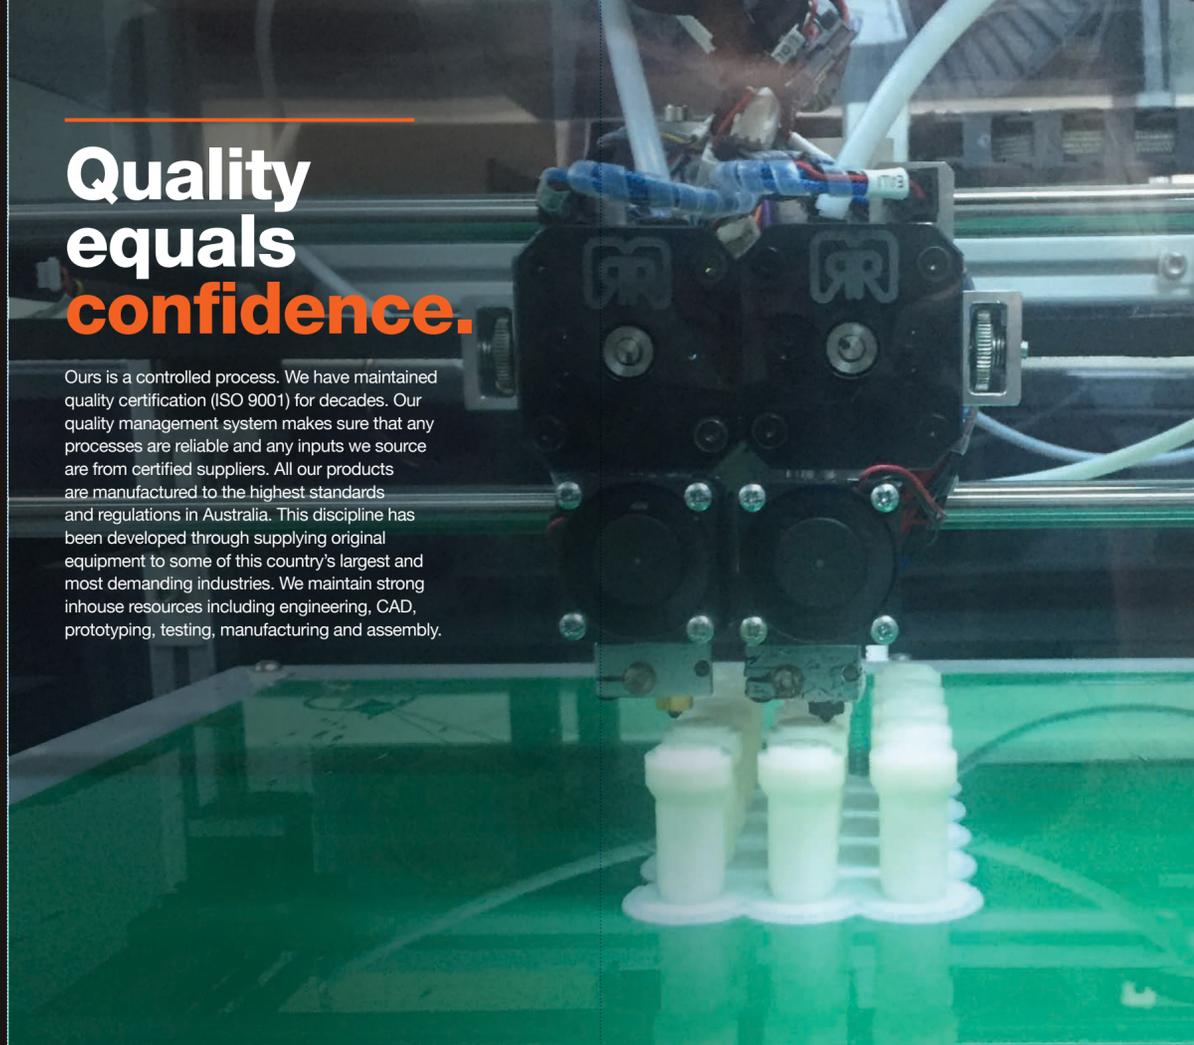

Our OEM customers need to keep their costs in check so they can offer the best value to their customers. We know that we are providing an input to a much larger offer. We aim to give you that great value without compromising the quality of the products provided.

We are always looking to create the best value equation for you, offering great products at the lowest possible price.

Quality equals confidence.

Ours is a controlled process. We have maintained quality certification (ISO 9001) for decades. Our quality management system makes sure that any processes are reliable and any inputs we source are from certified suppliers. All our products are manufactured to the highest standards and regulations in Australia. This discipline has been developed through supplying original equipment to some of this country's largest and most demanding industries. We maintain strong inhouse resources including engineering, CAD, prototyping, testing, manufacturing and assembly.

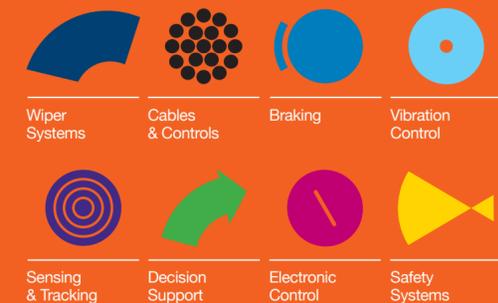

We're here for you.

At Flexible Drive we do things a bit differently. We have a focused approach towards important categories, which means that we can provide you with the best product, at the best price.

We are dedicated to building with you to become the kind of trusted supplier you can rely on.
